SCR Title *

OMI Staff Information Application Production Upgrade

Change Requestor, if other than Reporter

Search for a user

Division / Program *

OMI | OMI

Detailed Description *

The Staff Information Application (SIA) is a web app that provides access to the PIFSC Oracle personnel database (PEEPS) for information that is not sensitive and does not contain PII. There are two web pages; one provides a sort-able tabular staff directory listing and the other shows a formatted organization hierarchy chart. The web app is implemented as a docker container. Detailed information about the docker application and the individual web pages included in the app can be found in the attached technical documentation (Staff Info App - Technical Documentation.pdf)

This SCR is being submitted to replace the existing production Staff Directory App hosted on the OCI docker host with the Staff Information Application.

The current docker container will be shutdown, the source files will be transferred to the docker host to replace the current docker container's source files, and the docker image will be rebuilt and the upgraded container will be run.

Including Implementation steps

Justification *

The Organization Hierarchy Chart app stopped working during the OCI "lift and shift" migration process. The SCR seeks to restore the functionality that was lost and implement some additional improvements for the organization chart and staff directory web pages (tooltips, refactored code, HTML5, security controls, etc.).

Reason for Change

Urgency *

Medium

Urgency Reason

This is a routine production application upgrade to restore and improve functionality that was lost during the PIFSC OCI migration in May/June 2025.

Reason for Emergency/Urgency, e.g., Hardware failure, Software failure, Active Security vulnerability exploitation

Change Testing Plan *

The application's functionality was tested by the software developer. Formal User Acceptance Testing was performed by the data system's stakeholders. The security of the Apex app was evaluated by the PIFSC ISSO using the Qualys Web Application Scanner tool.

The automated upgrade and rollback process has been tested by the software developer using the dev and test versions of the OCI docker host.

Per policy, testing is required

Change Rollback *

If the production upgrade does not work I will re-deploy the current version of the staff directory from source code to restore the current functionality. The change can be rolled back within 15 minutes.

Provide/Explain rollback plan and Estimated total time to recover

Outage expected? *

- (•) Yes
- ( ) No

Outage Duration

0.5

In HOURS

Change Impact on Operations *

There will be no impact on operations within the OCI production docker host server, but the existing Staff Directory App will not be available while the production upgrade is being applied. The downtime for the SIA will be coordinated with users and they will be notified when the upgraded app is available.

Describe how this change impacts operations, mission, users, services, functionality

Change Impact on Network *

None

Describe any impact this SCR will have on availability, reliability, or access to existing networks; including potential down time, patches, and other upgrades.

Change Impact on Security *

The production upgrade will not be applied until the PIFSC ISSO reviews and approves the application security report.

Describe any impacts this SCR has on Network Security, Firewall Configuration, User Access, Single Sign On, Vulnerabilities, etc

Change start date

08/13/25 07:30 AM
